

Impinj Fast Track Services

INFORMED DECISIONS LEAD TO SUCCESSFUL OUTCOMES

Impinj Fast Track Services help accelerate RFID projects. As the leading provider of core RFID technology, Impinj has helped many customers successfully introduce RFID into their operations, often solving difficult technical challenges along the way.

RFID has the potential to vastly improve business processes and enhance customer experience. However, each application has individual needs and RFID requirements. Expert support from the industry's technology leader to tailor RFID to specific application requirements reduces risk and helps accelerate projects to successful completion.

Our goal is to make it easy for our partners and customers to deploy scalable and reliable RFID solutions by complementing our world class products with services support. Through Fast Track Services, Impinj experts help to remove technical obstacles and ensure application success.

Fast Track Services include:

- > Monza® tag chip antenna designs optimized for specific applications
- > Indy® reader chip integration design support
- > Speedway® reader software development and support
- > Custom reader antenna development
